

# Lesson Summary

Title: test lesson

Video URL: [https://www.youtube.com/watch?v=9XJicRt\\_Fal&t=1s&pp=ygUGamF2YWZ4](https://www.youtube.com/watch?v=9XJicRt_Fal&t=1s&pp=ygUGamF2YWZ4)

## Summary:

hey what's going on everybody it's you  
bro hope you're doing well and in this video i'm going to explain how we can  
install and set up java fx for eclipse so  
sit back relax and enjoy the show if you wouldn't mind please like comment  
and subscribe one like equals one prayer for the  
youtube algorithm all right people so i have listed seven  
steps which we need to follow in order to get  
java fx up and running so i'll include these steps in the description down  
below as well as any relevant links so be sure to look in the description  
all right people step one is to download the java fx  
sdk you can just google this java fx then go to the first link  
this is the url open jfx dot io so on this webpage scroll down to  
getting started then go to visit and then select the  
correct java fx version for your ide  
in this video we're covering eclipse but we'll cover intellij idea next  
so java fx and eclipse then go to non modular from ide and click  
this link javafx sdk this should bring you to another web page  
gluonhq.
